---

We simulate the productivity of PV installed on the suitable roof area, and present the technical potential of PV on both small buildings and medium/large buildings for every state in the ...

Most states are generating more electricity from solar on homes than from solar on businesses and industrial sites, but there are exceptions, including some of the top states for rooftop solar, such as ...

Environment America modeled the viable technical potential for rooftop solar in the United States, finding that it can serve 45% of U.S. electricity ...

We utilize a dataset that measures existing rooftop solar installations and classifies rooftops in terms of insolation, azimuth angle and pitch, shading, and size, from aerial imagery last ...

Rooftop solar installation is mainly done by small- and medium-size companies, which leads to a wide variety of approaches and cost variation. The ...

in 2016, there are over 8 billion square meters of rooftops on which solar panels could be installed in the United States, representing over 1 terawatt of potential ...

Production of small-scale solar installations increased by ten times between 2012 and 2022, but the US has only tapped into a small fraction of the ...

Consistent statewide policies on permitting, interconnection policies, rate designs and solar incentives can help make rooftop solar accessible and attractive to homeowners and business ...

We provide a detailed estimate of the technical potential of rooftop solar photovoltaic (PV) electricity generation throughout the contiguous United States.
