-----

This research proposed power flow controller system to control DC-AC hybrid distribution generating network power consumption. The proposed energy management syst.

For hybrid AC/DC microgrid, autonomous and bidirectional power flow between AC and DC subgrids with superior dynamic performance is the ...

In this paper, an AC/DC optimal power flow method for hybrid microgrids and several key performance indicators (KPIs) for its techno-economic assessment are presented.

Regarding the hybrid AC/DC MG, the adaptive neural network is used to optimize the power flow between the RES and the grid by dynamically adjusting the operating conditions to ...

This article presented an in-depth study of power flow optimization in a hybrid microgrid that integrates both AC and DC energy sources. The objective was to develop an optimal energy ...

paper, we propose an optimal power flow (OPF) paradigm for hybrid AC/DC microgrids. A meticulous model of the inter linking converter (IC) is developed and inte-grated into the OPF problem ...

In our study, we are focusing on a hybrid AC/DC MG connected to a main AC grid, and using WTs based on a doubly fed induction generator (DFIG), PV panels, AC and DC loads as well ...

To investigate the effect of the power flow analysis and SCA, this study includes the various techniques of the load flow analysis of AC, DC, and ...

Key features of the proposed algorithm: Controls the power flow through the interfacing converter between the AC and DC subgrids.
