---

Recent scientific and technological advances in Argentina around lithium extraction and processing, as well as the manufacturing of components and batteries, spotlight the potential of ...

The project's hybrid processing approach combines traditional solar evaporation with direct lithium extraction technology, addressing both ...

Argentina has a privileged situation for the Lithium Value Chain (LVC) development since it accounts for 22 percent of worldwide lithium resources and a great number of exploration projects in lithium ...

Provinces are proposing road improvements, power-transmission extensions, and industrial parks linked to lithium processing. If these initiatives ...

Extracting lithium from impure brine involves solar evaporation to concentrate lithium, followed by a purification, filtration, and washing process. ...

The PPG Project is designed to produce primarily lithium carbonate but preserves flexibility on the product mix, including lithium hydroxide and lithium chloride to align the final lithium ...

We specialize in large-scale energy storage systems, mobile power stations, distributed generation, microgrids, containerized energy storage, photovoltaic projects, photovoltaic products, solar industry ...

Designing a lithium-ion battery pack is a complex and multifaceted process that requires a deep understanding of the components, configurations, and safety considerations involved.

The country's lithium production is rising, and a new battery plant will be one of the first facilities to process the metal domestically, with hopes of adding value to its industry.
