This web mapping application gives estimates of photovoltaic potential (in kWh/kWp) and of the mean daily global insolation (in MJ/m<sup>2</sup> and in kWh/m<sup>2</sup>) ...

Herein, we propose a novel approach to estimate the spatial distribution of the general potential of rural rooftop power from publicly available satellite images.

View an interactive map or download geospatial data on solar photovoltaic supply curves.

Of the total solar capacity installed in the U.S., over 26 percent corresponds to residential installations. This segment has grown in recent years, ...

This report aims to provide findings for high-level comparisons between countries and regions on their solar energy potential and is intended to raise awareness, ...

Deployments will average 40 GW annually over the next five years, but the risk posed by attacks on the permitting of solar projects, further treasury guidance, and uncertainty in the solar supply chain could ...

We developed a new method to identify PV panels globally, producing an annual 20-meter resolution dataset for 2019-2022.

Unlike rooftop PV systems, which have limited or no land-use impacts by virtue of being mounted on existing structures, utility-scale PV plants are, by definition, sited on the ground and in the landscape ...

The U.S. Large-Scale Solar Photovoltaic Database provides the locations and array boundaries of U.S. photovoltaic facilities, with capacity of 1 megawatt or more.
