Learn about the solar system in astronomy. Get its definition, discover the planets in order, and get interesting facts.

Solar System basics for kids: learn how the Sun, 8 planets, moons and other bodies interact through gravity, their orbits, temperatures, and unique fun facts.

Discover the Solar System explained in simple words: Sun, planets, moons, asteroids, comets, Kuiper Belt & Oort Cloud. Easy guide with facts & diagrams.

Along with the sun, our cosmic neighborhood includes the eight major planets. The closest to the sun is Mercury, followed ...

Revolving around the sun are eight planets. The planets are divided into two categories based on their composition, terrestrial and Jovian. Terrestrial ...

The Solar System is so named by its most prominent member - the Sun. Going from center outward, the Solar System consists of the Sun, 4 "terrestrial" planets, an asteroid belt, and the four gas giant planets.

Outer Solar System
Trans-Neptunian region
The Solar System is the gravitationally bound system of the Sun and the masses that orbit it, most prominently its eight planets, of which Earth is one. The system formed about 4.6 billion years ago when a dense region of a molecular cloud collapsed, creating the Sun and a protoplanetary disc from which the orbiting bodies assembled. Inside the Sun's core hydrogen is fused into helium for billions of years, releasing energy which i...

Our solar system includes the Sun, eight planets, five officially named dwarf planets, hundreds of moons, and thousands of asteroids and comets. Our solar system is located in the Milky ...

Basic solar system

Through this guide, you will know what materials to buy, important technical terms used in this process, and step-by-step instructions on making a ...
