-----

Faced with persistent generation challenges at its flagship Morupule B power station, Botswana is considering the construction of a new 615 ...

Botswana's first Integrated Resource Plan (IRP) was introduced in October 2020 and later revised in July 2022 to expedite the implementation of approved ...

Revised in April 2025, this map provides a detailed view of the power sector in Botswana. The locations of power generation facilities that are ...

Standard requirements for Botswana Power Corporation distribution systems: design, materials, installation, and drawings.

Botswana is actively considering the construction of a new 615-megawatt coal-fired power plant, a move driven by persistent generation challenges at its existing Morupule B power station.

A plan is in place to secure a 615MW base load coal fired power station, which is expected to take 18-24 months to address the prevailing ...

The government's latest move, a plan to construct a new 615-megawatt (MW) coal-fired power station near the existing Morupule B facility, ...

The first objective will be achieved by adding 600 MW new capacity through 4 units of 150 MW each, adjacent to the existing Morupule A power station, and associated transmission lines and substations.

These strategic objectives were assessed through developing and analysing energy supply scenarios, considering the available resources for power generation, existing generating facilities, power ...
