China broke its own records for new wind and solar power installations again last year, official data showed on Tuesday, accelerating from ...

Solar panels and wind turbines are seen at the Huaneng Binzhou new energy power generation project in Binzhou, in China's eastern Shandong ...

This review further proposes a strategic roadmap for sustainable development, emphasizing the integrated deployment of wind and solar as the dominant sources of power generation.

In the 12 months to June 2025, wind and solar generated more electricity than hydro, nuclear, and bioenergy for the first time. Just four years ...

In Q1 2025, China's wind and solar capacity surpassed its thermal (coal and gas) capacity for the first time, supplying nearly 23% of the country's total electricity ...

China's installations of wind and solar in May are enough to generate as much electricity as Poland, as the world's second-biggest economy ...

China raced ahead building renewable energy last year, installing more wind and solar power than ever before and continuing to leave all other countries in the dust.

China, for all its world-heating pollution, is a global renewables powerhouse. The country is constructing two-thirds -- nearly 339 gigawatts -- ...

Chinese renewable generation reached 366 terawatt-hours (TWh), making wind and solar the country's largest sources of new power. This transformation has also driven the rise of new ...
