Critics of wind and solar routinely raise concerns about how much land would be required to decarbonize the US power sector. Fortunately, the ...

Like fossil fuel power plants, solar plant development requires some grading of land and clearing of vegetation. However, as utility-scale photovoltaics (PV) technology has improved over the last ...

The co-location of solar PV and agriculture can provide agricultural enterprises with diversified revenue sources and ecological benefits, while reducing land use competition and siting restrictions.

Unlike rooftop PV systems, which have limited or no land-use impacts by virtue of being mounted on existing structures, utility-scale PV plants are, by definition, sited on the ground and in the landscape ...

Agrivoltaics are the co-location of ground-mounted rows of solar photovoltaic panels to produce electricity together with raising certain types of crops or livestock or providing pollinator ...

As renewable energy becomes a cornerstone of global efforts to reduce carbon emissions, solar power is emerging as a highly attractive ...

This dual land-use approach allows solar energy production to coexist with farming activities, from crop cultivation to livestock grazing and ...

Discusses the land use and energy permitting processes for permission to build a solar array and provides examples of why permitting processes can affect farmland solar development.

This report provides data and analysis of the land use associated with U.S. utility-scale 2 ground-mounted photovoltaic (PV) and concentrating solar power (CSP) facilities.
