-----

China is accelerating its energy transition at a pace exceeding its own projections: by 2024, it had already reached the wind and solar capacity ...

China's solar panel installations surged in the first half of the year as developers sought to complete projects before the new policy, which removed a ...

China is using the high-altitude expanse for immense solar panel farms and wind turbines and has begun work on the world's largest hydroelectric ...

The massive growth in wind and solar begs the question: why is China still building coal power plants and, by most analyses, way more than it actually needs? The answer is complicated.

China's largest single solar power project built on former coal mining subsidence land has begun operation in Lingwu, Ningxia Hui Autonomous Region. The 4-gigawatt photovoltaic plant ...

Solar surged 64% in H1 2025 with 380 GW added worldwide, led by China's record pace, keeping 2025 on track for new highs.

So there is a lot of uncertainty in the Chinese solar industry, but there are also irrefutable facts: China needs to continue to expand domestic ...

China's solar generating capacity is expected to surpass coal for the first time this year, according to the country's top electricity industry group, marking a milestone in the country's...

The 277 GW of utility-scale solar capacity installed in China in 2024 alone is more than twice as much as the 121 GW of utility-scale solar capacity installed in the United States at the end of ...
