Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal, ...

As traditional coal plants grow older, we're seeing a rapid increase in the use of renewable energy sources such as wind and solar power. This shift is ...

The world's wind and solar farms have generated more electricity than coal plants for the first time this year, marking a turning point for the global ...

For the first time, renewable energy has overtaken coal as the primary source of electricity around the world, a new report says, indicating a shift in the ...

Power from coal fell about 1% as growth in cleaner energy sources covered all the increase in electricity demand last year. China added 315 gigawatts of solar capacity and 119 gigawatts of wind in 2025, ...

Renewable energy overtook coal as the world's leading source of electricity in the first half of this year - a historic first, according to new data from ...

For the first time on record, renewable energy from solar and wind produced more electricity than coal in the first half of 2025. For the first time ...

At the same time, even larger additions of wind and solar capacity nudged down the share of coal in total power generation last year. Power from coal fell about 1 per cent as growth in cleaner ...

With existing policies and scheduled retirements planned by plant operators, we expect that coal plant retirements will lead to U.S. coal-fired generation declining an average of 5% annually ...
