The main clauses of the guide are organized by cable type and each of these clauses has been organized to match the general steps involved in the design process for a substation cable system ...

The standard cable screen size is 10 kA where cable runs are wholly within the substation. The suitability of the standard cable screen fault rating for the intended application is to be confirmed by ...

This standard provides the performance and design criteria for buildings in major substations with the voltages of 132kV, 66kV, 33kV and 11kV. Refer to NS186 for details of the performance and design ...

This article explores the essential communication equipment used in substations, highlighting different protocols and their significance in enhancing ...

GENERAL: WAPA uses standards and project specifications for constructing substation, transmission line and other miscellaneous construction projects. The standards, project specifications, standard ...

In order to integrate substation protection, control, measurement and monitoring applications into one common protocol, a new communication protocol has been developed and standardized as IEC ...

PURPOSE: This bulletin provides a basic design guide and a reference tool for designing rural substations.
GENERAL: This Bulletin has been revised to bring the publication up to date with latest ...

This document covers communication systems for the purpose of ...

In IEC 61850 substation communication, GOOSE and SMV are 2 critical packet types that require high-priority attention. To guarantee that these messages are not corrupted, they are transmitted with the ...
