Should I disconnect the battery before unit removal? Yes, you should always disconnect the battery before removing any electronic ...

Disconnect and remove the battery cables from the right side of the battery breaker. Refer to the connection diagram on the inside of the front door of the classic battery cabinet.

The battery cabinet has several safety features, including a warning system to indicate low battery voltage, and a protection mechanism to prevent over-discharge of the batteries.

Replace the battery module in the battery cabinet and dispose of the replaced battery properly. It is not recommended that users repair the replaced battery module by themselves.

Do not attempt to stack the battery cabinet. Attempting to stack the battery cabinet may cause permanent damage and create a potential for serious personal injury.

To relocate your car battery safely, follow the instructions provided in your vehicle's manual or consult a battery relocation guide. Make sure to disconnect the battery and remove ...

Move at a slow pace and pay close attention on the floor conditions and the balance of the cabinet. Failure to follow these instructions can result in death, serious injury, or equipment ...

Batteries will self-discharge during storage. Batteries must be recharged as recommended by the battery manufacturer. A notice of "Charge Before Date" is affixed to each unit that has ...

Disconnecting terminals before moving the battery prevents electrical shocks or short circuits. Always disconnect the negative terminal first, followed by the positive terminal.
