-----

BEIJING, March 5 (Reuters) - China on Tuesday set more stringent energy intensity targets for 2024 after missing last year's goal, as the world's biggest energy ...

China's energy efficiency gains have had an enormous impact on energy use and emissions of heat-trapping gases.

In China, household income has increased at an annual rate of 6.31 % from 2002 to 2021, leading to a parallel rise in energy consumption. This trend underscores the importance of improving ...

Waste-to-energy incineration addresses the dual pressures of municipal solid waste growth and energy shortages. Persistently low energy efficiency has limited its role as energy sources.

This blog will take a look at the first 20 years of the China Energy Label (CEL), as well as other national programs that help shape consumer ...

Carbon intensity falls, but still high: China's carbon intensity is declining rapidly due to energy efficiency gains - but remains nearly double the global average.

Climate change has emerged as a global concern shared by nations worldwide. As the nation that leads the world in both energy consumption and carbon emissions, China sees its ...

China has developed a wide range of energy efficiency performance standards and codes detailing minimum energy efficiency requirements (or maximum unit energy consumption ceilings) for industrial ...
