A properly sized HESS and an implementable real-time energy management system are of great importance to achieve satisfactory driving mileage and battery cycle life, however, the introduced ...

Although the energy management method of hybrid energy storage system based on model prediction proposed in this paper achieves the designed optimization goal, the enumeration ...

Numerical simulations are added to compare the performance of the different EMS structures. The analysis of the results shows the effectiveness of the FBM in achieving power ...

This paper proposes a self-adaptive energy management strategy based on deep reinforcement learning (DRL) to integrate renewable energy sources into a system comprising ...

Zhang et al. (2018) examines a technique for energy management in a hybrid energy storage system (HESS) that combines electricity and hydrogen to produce power from renewable ...

In order to enhance the performance of Hybrid Energy Storage Systems (HESS) for electric vehicles, an energy management strategy based on intelligent algorithm

Based on this, this paper proposes a ship-oriented fuzzy control strategy to realize the energy management of the ship's HESS. The control strategy proposed in this paper is very simple ...

This manuscript proposes a hybrid technique for the optimum charging capability of electric vehicles (EVs) with a hybrid energy storage system (HESS), such as an electric vehicle, ...

This paper proposes an energy management framework for an electric-hydrogen hybrid energy storage system. The outer layer of the framework optimizes the hydrogen flow from the ...

Energy management of hybrid energy storage system
