This study introduces a novel approach by converting a low-voltage fossil-fuel-dependent grid in Ghana (Obaa-Yaa substation in the Drobo district) into a solar-powered microgrid using ...

Ghana recently launched its Scaling-up Renewable Energy Program (SREP), aimed at enhancing access to electricity for off-grid communities. The program comprises the development of ...

The study evaluated the impact of solar mini-grids that were set up in the Wayokope and Atigagorme island communities under the Ghana Energy ...

By Edward Acquah, GNA Accra, Feb. 21, GNA - Financing remains a major hurdle to scaling up microgrids and minigrids in Ghana's drive toward universal electricity access, Mr John Abdulai ...

Drawing on my academic background in Land Economy and ongoing studies in Environment and Management, as well as my lived ...

The Ghana microgrid controller market encompasses the various companies and technologies involved in developing and providing advanced control systems for microgrids in Ghana.

For Ghana, supportive policy frameworks will be essential in bridging this economic gap, ensuring that hydrogen complements batteries in building resilient, low-carbon rural electrification ...

Participants examined policy, regulatory and financing frameworks needed to scale up microgrid and minigrid deployment as part of Ghana's broader energy transition agenda.

The project will result in the investment of 35 renewable mini-grids, standalone solar PV systems in 400 schools, 200 units in health care centers and 100 units for community energy services centers.
