Here the authors fabricate heterojunction electrocatalysts to achieve improved performance in a polysulfide/iodide redox flow battery.

ABSTRACT Lithium-sulfur batteries represent an attractive next-generation energy storage technology, yet face challenges including the insulating nature of sulfur, lithium ...

Herein, we design a composite electrolyte with enhanced ionic conductivity and dendrite suppression by introducing gradient $\text{Li}_2\text{TiO}_3/\text{Li}_4\text{Ti}_5\text{O}_{12}$ (LTO) heterojunction fillers.

In this study, a p-diamond/n- Ga_2O_3 heterojunction betavoltaic nuclear battery is designed, incorporating an innovative stacked heterojunction structure and a low-energy-loss ...

Abstract Aqueous magnesium-ion batteries (AMIBs) have garnered a lot of interest in future energy storage due to their high energy density, easy preparation, and excellent ...

Photo-assisted zinc ion batteries (PAZIB) integrating solar energy harvesting, conversion, and storage attract increasing attention, but it remains challenging to design ...

In this work, we chose an iron-doped heterogeneous structured $\text{VO}_2(\text{B})/\text{V}_3\text{O}_5$ with a rich heterojunction interface and stability as a research object to test its application in ...

This innovative study provided in-depth insights into the electrochromism nature and a significant step in the realization of stable electrochromic-energy storage application, paving the way for ...

Google is building a bevy of renewable energy in Minnesota--including the world's largest battery system providing power for a whopping 100 hours
