---

Packed-bed thermal energy storage (TES) system filled with low cost and sustainable sensible thermal energy storage material (STESM) is a ...

The Savannah River National Laboratory (SRNL) is the U.S. Department of Energy's (DOE) applied research and development laboratory at the Savannah River Site (SRS).

This work provides a comprehensive overview of current research on flexible, high-temperature-resistant composite dielectrics for energy storage, ...

Dielectric film capacitors for high-temperature energy storage applications have shown great potential in modern electronic and electrical systems, such as aircraft, automotive, oil ...

Search across a wide variety of disciplines and sources: articles, theses, books, abstracts and court opinions.

The core technology of the company is in the solid material, HEATCRETE<sup>®</sup>, a purposely developed high temperature concrete with high thermal capacity and thermal conductivity ensuring ...

Here, a metadielectric strategy is used to fabricate thermally stable ...

This paper introduces the overall research efforts that have been and are being conducted to develop and demonstrate the novel design of the high-temperature latent heat storage device, HITB.

Thermal energy storage (TES) systems have the potential to satisfy the increasing demand for flexibility at particularly low costs, compared to e.g. electrical batteries. At KIT the focus is placed on high ...
