The report highlights several technological and market trends: Module efficiencies continue to improve, with n-type technologies now representing 70% of global ...

We expect this recent solar energy trend to continue in 2025 and beyond, resulting in solar panels with greater energy output per unit area of ...

Utility-scale PV (UPV) had its largest-ever market share of new capacity additions in 2024, but deployment of UPV is expected to slow down due to grid congestion, curtailment, and ...

Falling solar panel costs, ongoing technological advancements, ...

Growing demand for renewables-based clean electricity coupled with government policies, tax rebates, and incentives to install solar panels is expected to drive ...

The solar photovoltaic market size crossed USD 323.5 billion in 2025 and is expected to grow at a CAGR of 8.1% from 2026 to 2035, driven by integration of solar PV across agriculture and business ...

Photovoltaic (PV) solar accounted for 58% of all new electricity-generating capacity additions through the third quarter of 2025, remaining the dominant form of new electricity-generating ...

One of the latest trends in the market is the development of high-efficiency solar panels with improved energy output and durability. Leading players in the market are investing heavily in ...

The Solar PV market in the U.S. is projected to grow significantly, reaching an estimated value of USD 331.25 billion by 2032, driven by the need ...
