Discover how India's energy storage strategy can save consumers nearly INR60,000 crore each year while enhancing grid stability ...

India has set a target to achieve 50 percent cumulative installed capacity from non-fossil fuel-based energy resources by 2030 and has pledged to reduce the emission intensity of its GDP ...

Energy storage will be central to enable reliable, large-scale adoption of renewables to support India's transition to a clean, secure, and resilient power system, the ...

India's clean energy push is increasingly being shaped by three structural pressures: renewable curtailment, transmission delays and the urgent need for large-scale energy storage.

For India, the need for energy storage is even more urgent. The country has committed to increasing the share of non-fossil fuel-based electricity to 40 percent of installed ...

As India's grid attains higher penetrations of renewables, balancing generation variability through a spectrum of flexible resources, particularly energy storage, becomes increasingly important ...

Peak electricity demand has crossed 240+ GW Energy shortages have reduced to near zero Power generation capacity has increased considerably. Renewable energy ...

India extends transmission charge waiver to June 2028 to boost energy storage and clean power integration amid record renewable growth.

India has surpassed its 2030 renewable energy targets five years early through massive infrastructure scaling. The nation is transitioning from simple technology adoption to a ...
