-----

Growth in utility-scale and distributed solar PV more than doubles, representing nearly 80% of worldwide renewable electricity capacity expansion. Low module costs, relatively efficient permitting processes ...

According to the International Energy Agency, 2024 has been marked by a robust growth in global total electricity generation: 1,207 TWh (4%), owing to accelerating electrification of ...

This interactive chart shows the amount of energy generated from solar power each year. Solar generation at scale - compared to hydropower, for example - is a ...

Renewable energy statistics 2025 provides datasets on power-generation capacity for 2015-2024, actual power generation for 2015-2023 and renewable energy balances for over 150 countries and areas for ...

Renewables, led by solar, are still projected to go from one third of global power generation in 2024 to just under half by 2035 under the CPS ...

Electricity generation from renewable sources is growing rapidly worldwide, and the global installed capacity is expected to more than double by ...

Clean power surpassed 40% of global electricity generation in 2024, driven by record growth in renewables, especially solar. Heatwaves contributed to high growth in electricity demand ...

The rapid growth of solar power in recent years has been one of the most remarkable stories of global energy. In 2022, the world added more new ...

It examines the current state of solar power and related academic solar energy research in different countries, aiming to provide valuable guidance for researchers, designers, and policymakers ...
