You might want to look at quad-silver layer LowE coatings for those windows to minimize the solar heat gain. They will be darker than clear glass, ...

Tinted glass and glass coated with reflective films reduce solar heat gain in summer and heat loss in winter. The conductive heat gains or losses can be minimized by using multiple-pane windows.

In addition, the HISG exhibited excellent heat insulation capabilities that prevented excessive solar irradiation energy from entering the house when providing illumination, thereby ...

Although glass isn't highly effective at blocking heat, it is an excellent electrical insulator. This means it strongly resists the flow of electric current, a ...

Solar control glass is designed to reduce overheating in homes and buildings due to solar gain. By reflecting infrared radiation and allowing natural ...

High-performance glazing solutions have become essential for improving thermal insulation, ensuring energy savings, and ...

A product with a high SHGC rating is more effective at collecting solar heat during the winter. A product with a low SHGC rating is more effective at reducing cooling loads during the summer by blocking ...

Thermal insulating and solar control glass can help protect your home from heat and cold, keeping interiors at a more comfortable ...

Awnings block the sun at its highest during the summer, but glass lets natural sunlight in to brighten the space. Glass can be as effective at insulating a building as conventional materials, ...
