February 26 - Battery storage deployment in the European Union soared by 45% in 2025 to 27.1 GWh largely driven by growth in utility-scale batteries, according to a recent ...

The obvious answer to this conundrum is utility-scale Battery Energy Storage Systems (or BESS), capable of containing electricity from ...

Key findings highlight the growing expectations of lithium ion battery storage, the continued importance of pumped-storage hydropower and the significant potential of energy ...

By the end of 2025, operational battery storage capacity in Southeast Europe is expected to reach between 400 and 500 megawatts, with an estimated stored energy ...

In 2025, Europe's battery storage market entered a new phase of scale and maturity. With 27.1 GWh of new capacity installed, the European Union achieved its 12th ...

Europe's large-scale battery energy storage projects are shaping the continent's grid transformation, with evolving financing models responding to technical and regulatory ...

Our five-year outlook foresees significant BESS expansion in Europe - a sixfold increase to nearly 120 GWh by 2029, driving total capacity to 400 GWh, yet falls short of energy transition needs.

Discover the largest planned and under-construction battery energy storage projects in Europe as of mid-late 2025.

In Southeast Europe, Bulgaria and Greece are both stepping into this space, but their paths diverge in pace, policy, and investment ...
