Low Carbon develops both co-located and standalone battery energy storage assets and offers investment opportunities to unlock the full potential of ...

Research on the design and operational optimization of energy storage systems is crucial for advancing project demonstrations and commercial ...

The publication emphasizes that to unlock the full potential of renewables, we must scale LDES technologies, which help store excess ...

CCS holds the promise to significantly reduce carbon emissions from gas power plants and provide clean, reliable power to electricity grids. CCS ...

Using the Switch capacity expansion model, we model a zero-emissions Western Interconnect with high geographical resolution to understand ...

This report demonstrates what we can do with our industry partners to advance innovative long duration energy storage technologies that will shape our future--from batteries to hydrogen, supercapacitors, ...

The plan outlined 21 key measures, including scaling up energy storage applications in power generation and grid infrastructure, accelerating technological innovation, and improving ...

The present study puts forward an innovative low-carbon configuration of an integrated electricity-gas-thermal energy storage system based on LAES, LNG regasification, and gas-fired ...

Google has signed its first partnership with a long-duration energy storage (LDES) company. The tech giant signed a long-term partnership with ...
