-----

This project provides tools to simulate energy management and various dispatch algorithms in community microgrids with distributed energy resources (DERs). ...

Article Open access Published: 23 February 2026 Sustainable sizing, dispatch, and resilience planning of hybrid microgrids using Arctic Puffin Optimization Ahmed H. Yakout, Amr S. ...

An optimal power dispatch architecture for microgrids with high penetration of renewable sources and storage devices was designed and developed as part of a multi-module Energy ...

In order to address the impact of the uncertainty and intermittency of a photovoltaic power generation system on the smooth operation of the power system, a microgrid scheduling model ...

Additionally, we develop a two-stage stochastic programming extension of an existing microgrid design and dispatch optimization model to obtain uncertainty-informed and climate-resilient ...

This paper proposes a novel prediction-free two-stage coordinated dispatch framework for the real-time dispatch of grid-connected microgrid with generalized energy storages (GES).

Based on the aforementioned research, this paper constructs a microgrid power dispatch model that includes wind energy, solar energy, gas, diesel generation, and energy storage units.

It can solve the dispatching problems of microgrid and enhance its dispatching convergence accuracy, stability, and speed, thereby improving its optimization performance. Six ...

To minimize the environmental and total operating costs of the micro-grid intelligent scheduling system during grid connection, this study proposes a micro-grid intelligent scheduling ...
