The U.S. Department of Energy (DOE) recently announced the beginning of design and construction of a new Grid Storage Launchpad (GSL) facility intended to advance the development ...

WEIRTON -- A Minnesota-based Google data center will have some backup from a local source. According to officials, Form Energy will deploy a 300-megawatt and 30 gigawatt-hour multi ...

"The scientists and researchers who test everything from smaller prototype batteries to large, grid-scale battery systems will lead us forward into a ...

The tech giant's latest project pairs massive renewable energy capacity with a 100-hour battery to support data center operations.

Specialized chambers will be used to test and validate new energy storage technologies up to the 100 kilowatt scale under realistic electric grid conditions, preparing industry and...

Developing emerging energy storage technologies to increase efficiency and reliability on the electric grid has been challenging. To address this, New York ...

We are enhancing scientific knowledge and engineering methodologies to accelerate development of novel electrical energy storage ...

When complete in 2026, the energy storage center is expected to be the largest standalone battery energy storage project in the Great Lakes region.

This \$75 million research facility, funded by the Department of Energy (DOE) Office of Electricity, is focused on creating batteries and energy storage technologies ...
