---

In a landmark development for China's energy landscape, 2025 marked the first time solar power generation eclipsed wind energy. This historic transition stems from the aggressive ...

The report shows that many countries can operate power systems with 70% or more electricity from wind and solar, using proven technologies available today, ...

What is a wind-solar hybrid power generation system? In an era marked by rising energy demands, grid instability, and the urgent need for ...

Wind and solar photovoltaics (PV) are currently the fastest-growing sources of electricity globally. A "next generation" phase of deployment is emerging, in which wind and solar PV are technologically ...

New installations of generating capacity support the increase in our renewable generation forecast. Wind and solar developers often bring their ...

Solar and wind are growing fast enough to meet all new electricity demand worldwide for the first three quarters of 2025, according to new data ...

Worldwide solar and wind power generation has outpaced electricity demand this year, according to a new analysis.

Next Generation Wind and Solar Power (Full Report) - Analysis and key findings. A report by the International Energy Agency.

The review comprehensively examines hybrid renewable energy systems that combine solar and wind energy technologies, focusing on their current challenges, opportunities, and policy ...
