With the opening of the Mutkalampi wind farm, we are securing renewable electricity supply that will help power our global operations for the ...

We got there by switching to wind and solar power instead of traditional electricity from fossil fuels that contribute to climate change.

It also offers a thorough examination of H2 production methods utilizing solar, wind, and hybrid systems. An economic evaluation of GH production was analyzed by comparing the costs ...

We secure renewable electricity through consortium-led, long-term Power Purchase Agreements (PPAs) with wind and solar projects advancing the creation and availability of new clean ...

These panels, 50 times more durable than standard alternatives, redefine reliability in renewable energy. The advanced technology saves fuel and eliminates jump ...

Royal Philips, HEINEKEN, Nobian, and Signify have formed the first consortium to sign a Pan-European green energy deal securing additional renewable electricity for Europe.

Now, an analysis shows that these effects strongly favour the energy returns of wind power and solar photovoltaics, which are found to be higher than those of fossil fuels.

With Philips commitment to remain carbon-neutral in its operations and use 100% of electricity from renewable sources, the wind farm is a great ...

See how Phillips Power delivers ground-to-grid infrastructure with civil-first execution--solar, substations, and transmission done right.
