When exposed to sunlight, the Y6-NanoSH coated photovoltaic panel raises its surface temperature, inhibiting the growth and accumulation of ice and frost on its surface.

The easy-to-clean coating is used by solar panel cleaning businesses and manufactures around the world to help prevent stains and corrosion. The coating comes with a lifetime on residential solar ...

Scientists from the University of Illinois Urbana-Champaign have developed a multifunctional coating material to remove snow, frost and ice from ...

In this paper, we constructed a novel TiN-loaded photothermal superhydrophobic coating (ZIF-8@PDA@PF-POS@EP-TiN) via a facile spray-coating method for integrated passive anti-icing, ...

The solar panel coating works by chemically bonding to the glass, ...

To address these challenges and improve the performance of solar panels, nano coating technology has emerged as a game-changing solution. In this article, we ...

It is mainly applied to the surface of photovoltaic devices, which can alleviate the dust accumulation problem of photovoltaic panels in arid, high ...

However, the liquid film, frosting, and icing on the photovoltaic module seriously limit the efficiency of photovoltaic power generation. We developed a composite coating (Y6-NanoSH) by ...

University of Illinois scientists have developed a way to remove snow and ice from solar panels at a much faster rate than conventional ...
