-----

Herein, we propose a halogen-free solvent system to optimize film microstructure of the photovoltaic blend based on the polymer donor D18 and small-molecule acceptor (SMA) ...

In this study, a polymer donor NapBDT-C12 has been incorporated into an optimized PM6:L8-BO binary blend to fabricate ...

Can shredded EOL PV panels be used to recover Si wafer particles? We present a potential method to liberate and separate shredded EOL PV panels for the recovery of Si wafer particles. ...

Researchers at The Hong Kong University of Science and Technology (HKUST) have developed a multi-source co-evaporation recipe that markedly enhances the crystal ...

The high photovoltaic performance in these BDF terpolymer-based OSCs using non-toxic and environment-friendly non-halogenated solvents ...

This work promotes the development of non-halogen solvent processing of all-small-molecule organic solar cells and provides further guidance.

In this study, a 16.04% OPV device, processed under halogen-free conditions, is developed by employing a new active-blend system, PBDTTPD-HT:BTP-2F-BO. It is highly soluble in ...

This demonstration of large-area photovoltaic modules through roll-to-roll compatible printing methods, even based on a halogen-free solvent, suggests the great ...
