To promote advancements in the design, procurement, permitting, and construction of solar photovoltaic (PV) ground-mount, canopy, and roof-mounted structural systems.

We design and manufactures structural hardware for residential and commercial solar systems.

This RRE PV - Concrete system is based on precast and precast concrete supports. These supports are placed on the ground, after which the galvanized metal structure is built above them. The ideal ...

Explore cutting-edge design for photovoltaic panel support structures by renewable energy civil engineers.

Concrete foundations for solar panels are a common type of solar system support structure used in solar installations, with a variety of design and construction methods for different ...

The end of the platform beam is fixedly connected with the front stand column, and a buckle in the middle of the platform beam is clamped with the rear inclined strut.

With Dlubal Software, you can model, analyze, and design any type of photovoltaic support structures and mounting systems efficiently. From load determination to verification of steel, aluminum, and ...

To better understand the structural behavior and prevent potential failure, this study presents a simplified analytical model for the design of double-layer flexible cable photovoltaic ...

Axial Structural Solutions collaborates with various organizations in the renewable energy sector for the development of the photovoltaic energy sector, the reduction of CO2 emissions, and training within a ...
