It is the responsibility of the PV system designer to verify that the structural components of a building are capable of supporting the dead loads and live loads of a roof-mounted PV system.

Provide training on safe lifting techniques. Use support tools such as transport carts or cranes when necessary. Plan tasks to avoid repetitive movements or ...

This article outlines key strategies for effective HSE management in the construction and operation of solar PV projects.

Solar Landscape employees must use insulated tools or handling equipment, or both, when working inside the restricted approach boundary of exposed energized electrical conductors or circuit parts.

The anchor point must support a minimum of 5,000 pounds per worker attached and be installed at or above the worker's position whenever ...

USP support a number of Solar clients across the UK, providing the fundamental support and processes to ensure a safe and successful project. If ...

Ground mounted solar photovoltaic (PV) systems are exposed to a number of hazards during the construction phase. This Loss Prevention Standard outlines the main risks and provides useful ...

This introduction to solar construction safety provides information to help develop safe work practices for typical solar construction projects including both solar hot water and solar PV installations.

Learn how to stay safe while working with or around solar panels. Solar disconnects only disconnect buildings from PV panels. Panels can still generate power. If ...
