---

We will briefly review the state of the art of the EV connection to energy source categories, charging standards, charging methodologies, the ...

This paper presents a novel Li-ion battery fast charging a?| This paper intends to establish an overall up-to-date review on Fast Charging methods for Battery Electric Vehicles (BEV).

The comprehensive model of a DC fast-charging station has been built in Simulink, and its controllers have been designed to incorporate the proposed energy management scheme. A detailed simulation ...

This work proposes an integrated framework that combines deep learning-based solar forecasting with metaheuristic optimization for the design of ...

Our review focuses on integrating renewable energy sources with multiport converters, providing insights into a novel EV charging station framework optimized for EFC topology.

Abstract--This paper presents a techno-economic analysis of behind-the-meter (BTM) solar photovoltaic (PV) and battery energy storage systems(BESS) applied to an Electric Vehicle(EV) fast-charging ...

The study investigates the dynamic interplay between charging speed, solar energy utilization, and grid integration, shedding light on crucial considerations for optimizing the charging experience and ...

This analysis essentially governs the available charging methods, solar energy generation capacity, and the battery technology employed in electric vehicles (EVs).

Faced with a variety of charging interfaces, voltage standards, and power output options, understanding the advantages and disadvantages of various outdoor charging methods --such as solar charging, ...
