---

Despite the changing market and policy conditions that the solar industry has faced this year, solar will remain the dominant power source added to the grid in the next five years.

According to the U.S. Energy Information Administration (EIA), in 2022, 77 percent of total solar electricity generation came from utility-scale PV power plants, while 29 percent came from small ...

The report sets out that global power systems dominated by wind and solar generation can reliably deliver electricity at costs comparable to or lower than today's fossil fuel-based power systems in ...

2025 has been a challenging year for renewables. The new tax law, commonly referred to as the One Big Beautiful Bill Act, rolled back many clean energy tax credits and imposed new restrictions, ...

Solar and wind accounted for almost 96% of new US electrical generating capacity added in the first third of 2025, according to FERC data.

In our STEO forecast, utility-scale solar is the fastest-growing source of electricity generation in the United States, increasing from 290 BkWh in 2025 to 424 BkWh by 2027.

Dramatic improvements to solar technologies and other clean energy technologies have enabled recent rapid growth in deployment and are providing cost-effective options for decarbonizing the U.S. ...

There are two types of solar power: solar thermal and photovoltaic. The cost of solar power has dropped sharply, positioning the U.S. for an outburst of solar photovoltaic installations....

Solar cell manufacturing in the EU has grown 0.6 GW from 2022, with 7 active companies in this segment. There are 57 active module manufacturers in the EU. The EU recently adopted a ban on ...
