The different functions that energy storage systems show cause mistrust and uncertainty towards energy storage devices and existing regulations for the implementation of a project.

This toolkit offers insights into best practices for large-scale solar, focusing on public engagement, planning, permitting, and other topics.

The report provides practical guidance to policymakers and project developers on conducting initial feasibility assessments, selecting suitable business models, ...

Berkeley Lab collects, cleans, and publishes project-level data on distributed* solar and distributed solar+storage systems in the United States. The data are ...

The Major Solar Projects List is a database of all ground-mounted solar projects, 1 MW and above, that are either operating, under construction or under development. The list is for ...

NLR employs a variety of analysis approaches to understand the factors that influence solar-plus-storage deployment and how solar-plus-storage will affect energy systems.

The solar project development process involves a detailed, multi-phase approach, including site selection, regulatory approvals, system design, financing, construction, testing, and ...

In this article, we explore some common challenges in project development that may contribute to storage deployment delays and offer best ...

The Four Phases of Storage Deployment: This report examines the framework developed around energy storage deployment and value in the electrical grid.
