The EnerC+ container is a battery energy storage system (BESS) that has four main components: batteries, battery management systems (BMS), fire ...

The system allows for up to three batteries to be managed separately. This ensures that failed batteries may be isolated without adversely affecting the other batteries, as could happen if batteries were ...

Upgrade your battery system with our cutting-edge solutions for enhanced performance, longer lifespan, and increased energy storage capacity.

Battery container consists of battery system, battery management system (BMS), fire suppression system (FSS), thermal management system (TMS) and auxiliary distribution system.

The BESS boasts several key features, including high energy density, quick installation, unmatched reliability, low maintenance, scalable design, advanced battery management, excellent safety ...

The firmware allows to use different BMS monitoring ICs, which usually provide single-cell voltage monitoring, balancing, current monitoring and protection features. The chips currently ...

With 12 years in renewable energy storage, we've deployed 850+ optimized solar container systems across 23 countries. Our proprietary Battery Health Index (BHI) system extends operational lifetimes ...
