The U.S. solar market slowed in Q2 2025 with installations down 24%. Policy uncertainty and regulatory delays pose risks to long-term solar growth.

As solar power surges forward in states like California and Texas, a handful of states trail far behind, raising questions about the missed ...

Solar module manufacturers are struggling to raise PV module prices despite higher production costs following a recent silver price surge, which hit a record \$83.62 per ounce on Dec. 28.

US manufacturers do not produce enough solar panels to meet the nation's demand, but industry investments and federal tax incentives have been ...

This article has important implications for both the economic and environmental costs of solar facilities. If the inverters only last for 10 or 15 years, then the cost of the solar facilities ...

Federal data shows that installations of solar panels in the U.S. are climbing much more quickly than U.S. production of those panels. The ...

Solar continues to do the heavy lifting, followed by wind. Solar capacity is forecast to grow 9% in 2025, while wind is expected to jump 21%.

Delays in bringing these solar projects into operation have been trending down in recent months. Despite the relatively high number of projects reporting delays in 2024, that year was a ...

Expansions in U.S. solar cell, wafer and polysilicon production are lagging far behind module capacity, meaning module manufacturers will remain ...
