Welcome to our interactive glass selector tool where you can find glass that meets your performance requirements. To get started, input your required performance ...

The standard thickness of curtain wall photovoltaic glass typically ranges between 6 mm and 12 mm, depending on structural requirements and energy efficiency goals.

Cadmium telluride (CdTe) solar photovoltaic glass can be used as a solar curtain wall cladding solution that fits both new facade designs (Building ...

Curtain wall glass has to be the right type and thickness - and there are considerations to be made that don't apply to all structural glazing. In this article, we talk you through them.

Learn standard curtain wall sizes, panel dimensions, glass thickness ranges, framing depths, sightline options, and design factors for efficient facade planning. When planning a curtain ...

A curtain wall is a non-structural outer covering of a building, typically made of lightweight systems. Unlike traditional walls, curtain walls ...

The result is an innovative fenestration system with significantly improved thermal performance, maximum control of illumination potential and reduced solar heat gain. All at a lower installed cost ...

The thickness of curtain wall glass is a critical factor that determines its performance and safety. Curtain wall glass thickness is influenced by several ...

Size and thickness: Our photovoltaic glass modules are produced with size and thickness in order to suit any architectural specification for any individual project. Sizes up to 3.000 mm x 1.600 mm and up to ...
