Solar farms supply about 4% of the state's energy. But that's about to change with the huge solar projects recently approved or under review. Once ...

But the push to build utility-scale renewable energy projects is facing opposition from many rural residents and local governments. The most common ...

Solar deployment can look similar in many places, but every farm is different. NREL helps farmers and others navigate the challenges and complexities of implementing agrivoltaics in ...

Currently, there are several ways solar panels can be installed to complement agricultural activities. Fixed vertical or tilted panels provide partial ...

Research from a 2021 U.S. Department of Energy (DOE) study projects solar energy to rise from 4% of our nation's total energy production to 45% by 2050, potentially requiring nearly 10.4 ...

Across the country, many rural communities face high energy costs and limited access to affordable, reliable power. Reactivate helps close these gaps by delivering community solar projects ...

Agri-voltaics are the co-location of ground-mounted rows of solar photovoltaic panels to produce electricity together with raising certain types of crops or livestock or providing pollinator ...

With solar farms and wind turbines increasingly being built in rural areas, questions have emerged about the long-term consequences for ...

Rather than competing with agriculture, solar energy is becoming an important partner in sustaining rural economies, ensuring that both farms and ...
