The latest cost analysis from IRENA shows that renewables continued to represent the most cost-competitive source of new electricity generation in 2024.

Firstly, we collected 648 PV power generation projects and their techno-economic parameters, such as installed capacity, power generation, initial investment and operation and ...

For utility-scale generation put into service in 2040, the EIA estimated in 2015 that there would be further reductions in the constant-dollar cost of concentrated ...

The objective of this study was to estimate current generation costs and technical assumptions that enable the update of LCOE for onshore wind and large-scale solar PV technologies in...

With global energy demand projected to increase 47% by 2050 according to the 2025 Global Renewable Energy Outlook, understanding the true costs of wind and solar power isn't just ...

Accounting for capital costs in renewable energy projects involves intricate knowledge of regulatory and policy environments. These can affect the ...

The discussion below examines the accounting for virtual power purchase agreements (VPPAs). Such agreements may be top of mind for renewable stakeholders given that their use is ...

To accurately reflect the changing cost of new electric power generators in the Annual Energy Outlook 2025 (AEO2025), EIA commissioned Sargent & Lundy (S&L) to evaluate the overnight capital cost ...

This episode discusses the unique accounting issues associated with the wind power industry.
