The amount of electricity produced by wind power in the US plummeted to a 33-month low on Monday (22 July), with natural gas-fired ...

Our results show the global land area experiencing wind power shortages during heatwaves has risen by 6.3% per decade, reaching 60% by ...

U.S. wind energy generation fell last year, with the greatest decreases recorded in the Midwest.

Because of the concentration of wind capacity in the Lower Plains, the national wind performance pattern follows the seasonal wind performance pattern of the ...

U.S. electricity generation from wind turbines decreased for the first time since the mid-1990s in 2023 despite the addition of 6.2 gigawatts (GW) of new wind capacity last year.

Despite the installation of more and more wind turbines, wind production declined in July to a 33-month low. Wind production also declined in 2023 from the year before despite 7 gigawatts of ...

Wind generation data across key states confirms the impact of this seasonal pick up in wind speeds, with monthly power output usually peaking in ...

It is not unusual for wind power to decline during the summer months, but this has been a particularly bad month for wind. Six of the 10 lowest days for ...

July 24 (Reuters) - The amount of electricity produced by wind farms in the U.S. fell to a 33-month low on Monday, forcing power generators to crank up natural-gas fired plants to keep air conditioners ...
