Annual electricity generation from wind is measured in terawatt-hours (TWh) per year. This includes both onshore and offshore wind sources.

This report is published each hour and includes System-wide and geographic regional hourly averaged wind power production, forecasts, and the High ...

While wind power does not replace an equal amount of fossil-fuel capacity, it does replace production - for every MWh that is produced by a wind turbine, one MWh is not produced by another generator.

The repository (called PLUSWIND) is publicly available and contains hourly wind speed and generation estimates covering 2018 - 2021 for existing ...

The PLUSWIND repository provides a unified set of hourly wind speed and generation estimates based on information from three meteorological models; ...

It describes the ability of the wind farm as a whole to generate power given appropriate weather and grid conditions. Other names for this term are Project, Total, or sometimes Commercial ...

For example, in Tehachapi, California, where numerous wind turbines are located, the wind blows more frequently from April through October than it does in the winter months, and the ...

Despite the fact that each individual larger, more powerful wind turbine may be louder at its base, there will be fewer turbines overall in each ...

View data on DC ties, generation outages, resource plan details and scheduled generation, and find forms to submit generation and outage data/requests.
