Onshore wind farms require eight times the amount of critical minerals as natural gas power plants do. Offshore wind farms require 13 times ...

A key challenge facing the wind industry is the potential for turbines to adversely affect wild animals both directly, via collisions, as well as indirectly due to noise ...

Today's commercial-scale wind farms carefully space turbines to reduce the impact of these wind shadows, but given the expectation that wind ...

Epidemiological research on the association between wind turbines (WTs) and adverse health effects remains limited. This study integrated data from electronic health records from general ...

This is not true. A life-cycle analysis published in the scientific journal Renewable Energy in 2012 shows that, after only three to seven months, a wind turbine ...

People say wind projects near their homes, different from the off-shore wind farms at sea, have caused a range of harmful effects on their bodies, ...

Do windmills kill birds? Fact checking clean energy myths. Some objections to wind and solar farms are matters of opinion. Others are based on false information. We explain.

Wind turbines are very susceptible to damage from lightning because of their tall and metallic form, which, in very few cases can be dangerous for nearby animals or people. Wind turbines also ...

From noise pollution to the aesthetic impact and threat to wildlife, wind turbines are capable of wreaking havoc on the land where big wind farms are located. Let's ...
