-----

After previously demonstrating how the energy can be extracted as heat, they have now succeeded in getting the system to produce electricity, by connecting it to a thermoelectric generator.

Chalmers Research Information, research projects and publications for Zhihang Wang

Here, we introduce a novel hybrid device design strategy for a 3D freshwater-thermoelectricity generator that integrates a thermoelectric generator (TEG) with a monolithic steam generator (SG).

A hybrid solar energy system consisting of a molecular solar thermal energy storage system (MOST) combined with a solar water heating system (SWH) is presented.
